OBJECTIVE

Future computer engineer, data interests me as much for what it makes possible as for the ethical questions it raises, as shown by one of my projects on recovering deleted files. I am seeking a 6-week hands-on internship starting June 2027 to discover, in the field, how data is collected, used and protected.

EDUCATION

ENSEEIHT (N7) - Master of Engineering in Computer Science September 2026 - July 2029
Institut National Polytechnique (INP) – Toulouse, France

French Graduate School of Engineering (Grande École) known as N7.

Prep Classes in Maths and Computer Science (CPGE MPI*) September 2023 - July 2026
Lycée Louis Thuillier, Amiens

Highly selective prep program for competitive entrance exams to French Graduate Schools of Engineering. Ranked 4th out of 40.

High School Diploma (Baccalauréat) September 2020 - July 2023
Lycée Charles Baudelaire, Fosses

Majors in Advanced Mathematics, Computer Science, and Physics. Drama option. Graduated with honors

ENGAGEMENT AND EXPERIENCE

President of the MDL (Highschool Student Union): September 2022 - July 2023

Led a 7-member board, managed the music club and organized events (concerts, graduation prom). Ran a free weekly maths tutoring class.

Elected Student Representative on the Board of Directors, Lycée Charles Baudelaire: September 2021 - July 2022

Represented students on the school's Board of Directors and took part in the institution's decision-making.

SKILLS AND LANGUAGES

Programming Languages	Python, C, OCaml, Rocq (Coq), Ada, SQL
Tools	Linux, LaTeX, GitHub
English	B2+ Certified – 1-month immersion in Cambridge, UK (Kaplan, 2024)
French	Native

PROJECTS

Curve Reconstruction using Fourier Series (TIPE Project) 2025 - 2026
Presented at Université Paris Cité – GitHub Link *Grade: 17.5/20*

- Designed a program to extract shapes from images and faithfully reconstruct them using complex Fourier series.
- Real-time visual animation of rotating circles tracing the curves using C and the SDL2 library.

File Recovery from Raw Storage (TIPE Project) 2024 - 2025
Supervised Personal Research Project – GitHub Link

- Simulated a file system by programming a storage manager in C with SQLite to handle file metadata.
- Modeled file deletion mechanisms by tracking how raw data blocks persist on a storage medium without metadata.
- Collaborated on a file recovery algorithm designed to scan raw data dumps and reconstruct deleted files.
